Performance Management System

Maryland Aviation Administration
4th Quarter of CY2018
A Message From the Governor

“Our administration is committed to developing innovative solutions that deliver what Marylanders want – an affordable and reliable transportation system. By implementing a comprehensive program of accountability and continual improvements, we will deliver a better transportation system for the citizens of Maryland.”

“This is another step our administration is taking to Change Maryland for the Better!”

– Larry Hogan, Governor

CHANGING Maryland for the Better
The Maryland Department of Transportation and its Transportation Business Units proudly present the official mission statement.

MISSION STATEMENT
“The Maryland Department of Transportation is a customer-driven leader that delivers safe, sustainable, intelligent, and exceptional transportation solutions in order to connect our customers to life’s opportunities.”
My Fellow Marylanders,

I am proud that the Maryland Department of Transportation Excellerator Performance Management System is in its third year. We have made great strides in developing and implementing performance measures, refining strategies and focusing on delivering results for our customers.

We have created more than 150 individual performance measures that touch every aspect of our business throughout the organization. Whether we are building and maintaining our roads and bridges, running safe and efficient bus and rail systems, operating an international port and airport or improving the vehicle and driver registration process for Marylanders, we stand strong in our commitment and responsibility to deliver the best transportation products and services for our customers.

Every quarter we review our progress and share our results online for public inspection and within the organization through a live stream of our quarterly review meeting. This allows all 10,271 MDOT employees the opportunity to see the impact of the work they do each day and how they contribute to running a safe and secure transportation system.

Most importantly, we are delivering results. As we respond faster to customer inquiries, become increasingly efficient in using our resources wisely and providing a stronger foundation for economic development for the State, we will continue to deliver exceptional customer service and create more value for those who live and travel throughout Maryland.

I invite you to continue to review our MDOT Excellerator program as we continue down the path of constant progress towards outstanding results.
“The Maryland Aviation Administration fosters the vitality of aviation statewide and promotes safe and efficient operations, economic viability, and environmental stewardship. Responsible for the operation of Baltimore/Washington International Thurgood Marshall and Martin State Airports, MAA provides friendly, convenient facilities and customer services and develops enhanced domestic and international passenger and cargo opportunities through inter-modalism and state-of-the-art technology.”
Dear Valued Customer,

It is with great enthusiasm that I present the Maryland Aviation Administration (MAA)’s performance measures as a part of the MDOT’s Excellerator Performance Management System. Performance management is a cornerstone of the MAA’s management philosophy and continuous drive to surpass customer satisfaction.

As a Transportation Business Unit (TBU) of the MDOT, MAA is further supporting the MDOT Excellerator Performance Management System with a new four-year strategic plan. This Strategic Plan is a product of the Governor’s vision, MDOT’s mission statement, and feedback from many valued stakeholders and engaged employees. Through this Strategic Plan, Baltimore/Washington International Thurgood Marshall Airport, Martin State Airport, and our Office of Regional Aviation Assistance will provide services that are second-to-none.

The MAA has five (5) TBU-specific performance measures. These performance measures will drive performance related to customer service and the airport system’s financial position. Furthermore, our four-year Strategic Plan is comprised of five (5) goals which are powered by 103 strategic objectives and hundreds of multi-year strategic initiatives. The MAA is inspired by a vision to “be better.”

Again, we are enthusiastic about this opportunity to link the strategic priorities of the MAA with the ‘life’s opportunities’ of our customers in a manner that compels greater employee performance.

PERFORMANCE MEASURE MAA 1.1
Total Airport Council International’s (ACI) Airport Service Quality (ASQ) Score

The Airport Council International’s (ACI) Airport Service Quality (ASQ) product is a world-renowned and globally established research and benchmarking program that measures a passenger’s satisfaction while they are actually traveling through an airport. The ASQ program provides the research tools and management information needed to better understand passengers’ views and what they want from an airport’s products and services.

ASQ is an important key to understanding how to increase passenger satisfaction at BWI Marshall Airport. ASQ research is in place in airports that serve more than half the world’s 6.6 billion annual passengers and provides unique data covering a wide range of important issues from the impression of restroom and terminal cleanliness to the quality of a passenger’s dining or shopping experience. It allows BWI Marshall Airport access to some of the best practices utilized by airports around the globe that produce the highest levels of customer satisfaction. This important tool is vital to reaching the goal of ensuring BWI Marshall Airport remains a world-class airport while aiming even higher to provide one of the best customer experiences available.

BWI Marshall and its airport partners have implemented a variety of passenger amenities to improve the airport experience and customer satisfaction. These include: the installation of post-security water bottle refill stations; an increase in the number of rocking chairs around airport, an amenity that is often positively commented on; installation of dedicated nursing stations for mothers; increased charging capability for personal electronic devices; improved food and retail concessions; valet parking and new shuttle buses. Utilizing ASQ data from future surveys, BWI Marshall continues to identify airport amenities designed to improve the airport experience.

Provide Exceptional Customer Service
MDOT receives resources from customers and they expect products and services in return. To better serve customers, MDOT must maximize the value of every dollar spent.

RESULT DRIVER:
Corey Stottlemyer
The Secretary’s Office (TSO)
PERFORMANCE MEASURE MAA 2.1
Percentage Change in Revenue vs. Percentage Change in Enplanement Growth

This measure compares the percentage change in revenue growth to the percentage change in passenger enplanement growth. Comparing the two data sets indicates the ability to maximize revenue from sources such as non-airline services, including parking and terminal concessions, with the goal of growing revenue at a faster pace than the growth in enplaned passengers.

The growth in revenue indicates that MAA is providing those services most desired by the traveling passenger such as available and accessible parking facilities and preferred food, beverage, and retail products.

The first bar is the percentage growth in revenue, the second bar the percentage growth in enplaned passenger and the third bar the gap, or difference, between the first and second bar. A positive gap amount reflects that on a quarterly and annual basis MAA is growing passenger revenue at a faster rate than the growth in enplaned passengers.

PERFORMANCE MEASURE MAA 2.2
Cost Per Enplaned Passenger

MAA has a responsibility to its customers to provide quality services for a fair price. Cost Per Enplaned Passenger or Cost Per Enplanement (CPE) is the average passenger airline payments per enplaned passenger at a given airport. It is an industry-wide accepted measure to understand if MAA is effectively managing its costs at BWI Marshall Airport.

The level of expenses and debt service charged to the airlines through the airport’s rate structure, as measured in the CPE metric, is an important indicator of financial performance. This metric provides an indication of the level of expense an airline incurs to operate at an airport, and can also help gauge the potential for an airport to attract new carrier service relative to its peers or competitors. The metric is also an indicator of the amount of debt and expense incurred by the airport and reflects, to some degree, management’s ability to control costs. The impact of high CPE extends beyond financial performance because it is a key measure that air carriers, particularly low cost carriers, consider when determining which airports they will serve.

BWI Marshall Airport has on a historical and a current basis the lowest CPE among the four airports in this region (DCA – Reagan, IAD – Dulles, BWI and PHL – Philadelphia).

This enhances BWI Marshall’s ability to attract new entrant air carriers resulting in a broader range of available destinations and flight availabilities, incentivizes existing carriers to route more passenger traffic through the airport and results in a lower average fare for the air traveling public than available at other regional airports.

Maryland Aviation Administration (MAA)
Be a Good Neighbor

PERFORMANCE MEASURE MAA 8.1
Number of Noise Complaints by Geographical Area

BWI Marshall Airport is a part of the community and strives to be a good neighbor. Reaching out to residents and keeping them informed about ongoing or planned construction, runway closures and other activities helps build and maintain positive relationships. By gathering and tracking noise complaints from residents MAA gains an understanding of how business is affecting neighbors and lets MAA work together on possible solutions.

The pin maps show which communities around BWI Marshall have been impacted by aircraft noise during a particular time. This information helps MAA determine if more information needs to be provided to the communities or if there is an issue that needs to be evaluated.

Maryland’s transportation system is essential to the State’s economy. An efficient transportation system provides a competitive advantage to businesses in a regional, national and global marketplace. Transportation directly impacts the viability of a region as a place where people want to live, work and raise families, all critical to attracting a competent workforce.

RESULT DRIVER:
Jim Dwyer
Maryland Port Administration (MPA)
Facilitate Economic Opportunity in Maryland

PERFORMANCE MEASURE MAA 10.1
Number of Discrepancies by Public Use Airport

Transportation of goods and people by air allows for improved business productivity, effectiveness and responsiveness. This value is not just observed at large hub airports around metropolitan areas but also at local neighborhood airports serving the general aviation community.

Safe and inviting public use airports and heliports provide an economic value to the region they serve. These landing facilities generate jobs as well as business opportunities on and off airport that can be directly related to the availability of a public use airport. Without a safe, secure and service-oriented airport, the region would lose a valuable air transportation asset and link to the rest of the State and nation.

To provide a safe and inviting air transportation system in Maryland, MAA regulates all landing facilities in Maryland in accordance with COMAR 11.03.04, Aeronautical Regulations. The regulations set minimum standards for all airports to achieve and maintain. Each public use landing facility is required to maintain an Airport Operating License issued by MAA, and each airport is inspected at a minimum once per year. Any discrepancies that do not meet the minimum standards of COMAR 11.03.04 require immediate resolution. Discrepancies are inspection findings that would, if left untreated, become an unsafe operating condition for the flying public. By meeting the minimum standards, each public use airport serves the public as a safe aeronautical transportation asset to their respective community.

There are thirty-six public use airports serving Maryland citizens. The majority are in excellent condition, well-operated and maintained. The chart indicates the number of discrepancies per airport inspection annually. In general, an airport that has known discrepancy(ies) is required to resolve the discrepancy at the source. However, if unable to mitigate at the source, then airport operating restrictions are needed to ensure the safety of the flying public. While not ideal, operating restrictions do allow the airport to maintain public use operations albeit with limitation(s). Those with a high number of discrepancies receive MAA’s assistance in improving the facility.

All airports meet or exceed State licensing and compliance requirements and known discrepancies have been mitigated.

All Electronic Tolling (AET) – Collection of tolls at highway speeds using E-ZPass transponders or video tolling; no toll booths or cash collection.

Annual Attainment Report on Transportation System Performance – Pursuant to Transportation Article Section 2-103.1 of the Annotated Code of Maryland, the State is required to develop or update an annual performance report on the attainment of transportation goals and benchmarks in the Maryland Transportation Plan (MTP) and Consolidated Transportation Program (CTP). The Attainment Report must be presented annually to the Governor and General Assembly before they may consider the MTP and CTP.

Calendar Year (CY) – The period of 12 months beginning January 1 and ending December 31 of each reporting year.

Coordinated Highways Action Response Team (CHART) – CHART is an incident management system aimed at improving real-time travel conditions on Maryland’s highway system. CHART is a joint effort of the State Highway Administration, Maryland Transportation Authority and the Maryland State Police, in cooperation with other federal, state and local agencies.

Consolidated Transportation Program (CTP) – A six-year program of capital projects, which is updated annually to add new projects and reflect changes in financial commitments.

Fiscal Year (FY) – A yearly accounting period covering the time frame between July 1 and June 30 of each reporting year.

MPA General Cargo – Foreign and domestic waterborne general cargo handled at the public (MPA) terminals.

Port of Baltimore Foreign Cargo – International (Foreign) cargo handled at public and private terminals within the Baltimore Port District. This includes bulk cargo (e.g., coal, sugar, petroleum, ore, etc. shipped in bulk) and all general cargo (e.g., miscellaneous goods shipped in various packaging).

MAA – Maryland Aviation Administration operates Baltimore/Washington International Thurgood Marshall Airport (BWI Marshall) and Martin State Airport, a general aviation/reliever airport northeast of Baltimore.

MDTA – Maryland Transportation Authority operates and maintains the State’s eight toll facilities.

Mode - Form of transportation used to move people or cargo (e.g., truck, rail, air).

MPA – Maryland Port Administration promotes the Port of Baltimore as a leading east coast hub for cargo and cruise activity.

MDTA – Maryland Transit Administration provides Local Bus, Light Rail, Metro Rail, Paratransit services and regional services through commuter rail (MARC) and Commuter Bus, as well as grant funding and technical assistance.

MVA – Motor Vehicle Administration serves as the gateway to Maryland’s transportation infrastructure, providing a host of services for drivers and vehicles, including registration, licensing and highway safety initiatives.

SHA – State Highway Administration manages the State’s highway system which includes 17,117 lane miles of roads and 2,564 bridges.

TBU – Transportation Business Unit

TSO – The Secretary’s Office

Vehicle Miles of Travel (VMT) – A measurement of the total miles traveled by all vehicles.

The data contained herein is impacted by a number of variables and may vary and evolve depending on those variables.
